

BE SMARTY.

phaeno

da staunst du.

TAP the „Be Smarty“ button.

If the robot is currently chatting with other visitors, wait and tap the button again.

SLIP into the role of the robot. Guide it and talk to other visitors.

Does the other person behave differently than usual?

Do you behave differently?

Do you dare to ask someone on a date?

This robot was designed to interact with humans.

It is equipped with speech recognition and a number of sensors that enable it to move safely and cautiously.

The helpful robot can be programmed and deployed in many ways. It can offer help with information at museums and airports, react to visitors' questions or just chat with guests. Further fields of application are in healthcare, in company's reception areas or research projects.

„Be Smarty“ is a modified application for telepresence. It allows people from different areas in phaeno to communicate with each other through the robot. In theory, people from all over the world can be present in phaeno through this application.
