

GEOMETRON.

John Edmark

phaeno

da staunst du.

HOLD the shapes in the triangle shaped window.

WATCH the patterns appear.

BEGIN with a simple stripe for your first shape and move it around each of the three sides of the triangle.

The Geometron is a special type of kaleidoscope with three mirrors.

The mirrors are angled in relationship to each other to create the illusion of a three-dimensional globe with which you can watch and create different patterns.

A camera records the triangle in the window and the image is displayed on a monitor at the end of the mirror tunnel in real time.
