

Floating objects

Do you manage to balance different objects in the airstream?

Put a ball or other objects in the airstream and let them float.

Observe how the objects settle in the airstream.

Do you manage to balance two or more balls simultaneously in the airstream?

How do two balls of different size behave in the airstream?

How can you make the balls spin in the airstream?

What happens when you block one hose?

Can you hand over the flying objects from one hose to the next one?

Two hoses are connected with each other. They are supplied with air from one ventilator.
