

Airmaze

Can you manage to manoeuvre the ball from the green marked entry to the green exit?

Open or close the sliding doors made of Plexiglas to move the balls through the maze.

Can you reach all exits from one entry?

Each time you open or close a sliding door you change the air circulation throughout the maze.

The air needs an inlet and an outlet for movement.

For getting fresh air in a room one should always open two windows or doors to optimize air circulation.
