

Be strong!

How does it feel to turn the two handwheels?

Turn both the yellow and the red handwheels. What do you notice?

Examine the setup of the experiment. How many different gears can you find?

Turn the yellow handwheel and Ask someone to stop you, using the red handwheel. Is it possible?

When turning the "fast" handwheel, it can hardly be stopped using the "slow" handwheel. When the "slow" handwheel is turned, it can be stopped simply with the touch of a finger on the "fast" handwheel.
